NFTs

- NFT stands for Non-Fungible Tokens .
- NFTs are digital items that can be bought and sold using blockchain technology.
- They are not fungible, making them a different type of asset, one that is based on value and popularity.
- 2022 is expected to be the year of non-fungible tokens (NFTs).

Problem Statement

- The below diagram is the Technology Adoption cycle that describes the adoption of new things in society where NFTs is at early stages .
- This is because most people truly don't understand it and don't have proper knowledge about this.
- There is a fairly large supply and demand gap in the Indian NFT market.
- And people are still sceptical about investing in NFTs.

Proposed Solution

We are building a platform where we will be doing exploratory data analysis on NFT and predicting the future trends and prices of NFTs using Machine Learning.

THANK YOU
